

Sustainability Policy

Wikoff is committed to sustaining a manufacturing process that reduces harm to people and the environment. We focus on developing low-VOC products that help reduce emissions and improve safety. We work to remove hazardous chemicals, including PFAS, from our products whenever possible.

We aim to reduce waste by improving how we use materials and by recycling responsibly. We seek to lower our use of energy and water and reduce our overall environmental impact. Sustainability is part of how we design products, work with suppliers, and operate our business.
