

**label &
narrow web**

beyond color

labels that perform

labels are the face of the brand, and Wikoff makes them shine.

We offer a full range of inks, coatings and varnishes for narrow web presses and specialized substrates, delivering vibrant, durable and consistent results for commercial, retail and packaging labels.

water-based inks

MARATHON

Wikoff's flagship water-based ink system for a wide range of substrates. Print compatible with aqueous and UV coatings and film lamination. Delivers high-quality graphics, excellent adhesion, long-run cleanliness, and easy cleanup.

POLYTECH XR

High-strength ink system designed for demanding print applications. Offers superior print quality and optimum adhesion to difficult substrates such as films, metallized papers, and foils.

NOBLEPRINT

Engineered for direct and indirect thermal applications. Provides clean printing due to its ability to easily transfer from anilox to plate to substrate, with exceptional gloss, heat resistance, rub resistance, and scratch resistance.

energy curable inks

PHOTOFLEX SERIES

The PHOTOFLEX family is a versatile line of UV and UV-LED flexographic ink systems engineered for outstanding adhesion, print stability, and performance across a wide range of substrates. Designed for demanding applications, these inks deliver excellent flexibility, stable viscosities, minimal dot gain, and strong tape adhesion — even on difficult materials. Available in standard and High-Shrink platforms — including Dual UV-LED for both Hg UV and LED curing — these inks perform on papers, films, foils, and shrink materials up to 90% shrink, making them ideal for shrink sleeve and in-mold applications. The PHOTOFLEX series is formulated without potentially dangerous chemicals and is available in Nestlé Compliant and Low-Migration systems, providing safe, high-performance solutions for today's evolving packaging needs.

from your solutions supplier

innovation runs deeper than ink

Imagine being able to rely on one trusted supplier for all your pressroom needs. That's what Wikoff has to offer. Make your job easier with products that keep your operations running better than ever.

BEFORE THE FIRST PRINT

Wikoff provides a comprehensive suite of photopolymer plates and prepress solutions for printers and converters, ensuring consistent print quality from file to press.

Our plate and proofing technologies streamline workflows and enhance efficiency, allowing you to bring designs to life exactly as envisioned.

AGILITY AT SCALE

Our digital inks and primers are engineered for today's most advanced digital presses and inkjet systems, ensuring superior color, adhesion and reliability.

From piezo and thermal inkjet to hybrid and single-pass systems, we partner with OEMs and converters to push the limits of what's possible in digital print.
